

Portable Tribunes

SPORCIM

- Our portable stands, which are portable and produced using disassembled materials, can be used for short or long periods of time in all sports organizations and similar events.
- Installation is carried out by passing and screwing methods. Since welded joining is not used, it can be disassembled and quickly assembled elsewhere.
- Static calculations of the produced stands have been made.
- The entire steel construction system is covered with hot dip galvanized methods to increase resistance to corrosion. As a result of this method, the steel is covered with an armor measured in microns. This armor prevents rusting even in many atmospheric environments. A design with hot dip applied can maintain its resistance on the first day for years without maintenance and repair.
- Seating groups made of polypropylene copolymer materials are used in our portable stands, the desired colors and models are assembled.
- SPORCIM also has ISO 9001:2015 and ISO 14001:2015 Documents approved by an organization in the EA (European Accreditation) group affiliated to the IAF (International Accreditation Forum).
- As SPORCIM, we have EN 1090-1:2009+A1:2011 "FACTORY PRODUCTION CONTROL CERTIFICATE OF CONFORMITY" approved by the TÜRKAK accredited institution.
- As SPORCIM, we have TS EN ISO 3834-2 "QUALITY REQUIREMENTS FOR MELTING WELDING OF METALLIC MATERIALS" approved by the TÜRKAK accredited institution.
