

# Stadium Seat

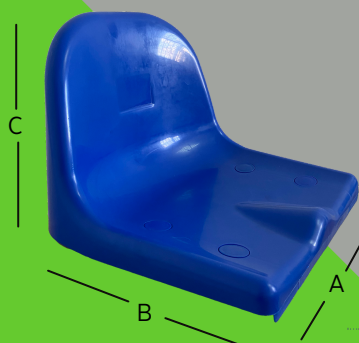

## 4 Points Fixed

# SPORCIM

- The production of the seat is made from original polypropylene copolymer raw material by injection method.
- No inorganic additives (talc, lime, glass) are used in its production.
- Color pigments with maximum light fastness are used for the protection of colors. In addition, its resistance against external factors has been increased with UV and Antioxidant additives.
- With its orthopedic structure, it is ergonomically designed to not disturb the back and legs.
- It has internal rib reinforcement and the backrest section is double-walled to provide strength when loaded.
- Water drainage is provided by the radius part and inclined structure on the front of the seat.
- The assembly of the seats to the floor is made from 4 points. After assembly, the hole slots are closed with a plastic cover and the contact of the screws with water is prevented.
- The front part of the seat is designed to prevent hand entry to prevent it to be dismounted.
- Main colors (Yellow -Red-Green - Blue -White) are available. Production is made in different colors with RAL codes according to customer demand.

## Product Info

Width ( A ) : 43,5 cm    Height ( C ) : 31 cm

Length ( B ) : 43 cm    Weight : 1500 gr

number per packing
